

10ex.ai

Outcome-as-a-Service for revenue growth

We're building world's first Agentic AI company that sells **outcomes**: engagement, MQLs and pipeline not just software.

THE PROBLEM

B2B teams are drowning in tools and **starving for outcomes.**

67%

of B2B buyers say vendors over-index on features, not business outcomes

GARTNER

10–15

tools used by the average B2B team — fragmentation without guaranteed results

CHIEFMARTEC

\$500B+

global martech spend — bought as potential, rarely as proven impact

MARTECH MARKET

CXOs don't buy software. They buy **outcomes**.

Unstated Need: **Uncertainty**

The gap to growth was never strategy. Founder's lose sleep over uncertainty, where are my next 5 customers coming from, which channel will work for me. Moreover, general purpose LLMs can build products can't handle the complexities of GTM..

Tool overload, not idea shortage

Teams run 10–15 tools but execution velocity stays low.

The agency model broke

Outputs without accountable, consistent execution.

Agents can now do the work

Tool-calling LLMs execute end-to-end, not just assist.

THE PLATFORM

An AI execution platform that delivers the end result

We marry intelligence + execution + delivery. Pick a goal, approve AI-generated work, and outcomes get shipped.

LAYER 01

Specialized Agents

Dedicated agents per channel — SEO, Outbound, Ads, Webinars, Analytics — each tuned for high-quality output.

LAYER 02

Workflow Orchestration

Task routing, dependency management, automated QA, retries and full execution logging — reliable at scale.

LAYER 03

Execution OS

Customer-specific memory: Brand Kit, ICP, messaging rules and task history. Compounds with every job.

SEO

Outbound

Ads

Webinars

Analytics

Customer-specific memory creates compounding intelligence and high switching costs.

OUR MISSION

To be the most **outcome-obsessed**
company in the world.

CXOs don't buy tools. They buy results. We built the first AI-native company that finally prices it that way.

TEAM

Builders who ship product **and** figure out GTM

Nikhil Kounjoor

FOUNDER

Product + GTM operator. Took MoneyHOP 0→1 across product and growth.

Sachin Bapure

TECH LEAD (Also Founder of TechOrigins.io)

Built MoneyHOP's full-stack engineering. Ships complex agentic systems fast.

Bidyut Banerjee

VP, PRESALES & SOLUTIONS (Ex-Sr. Director AI and Solutions)

Translates outcomes into enterprise deployments and trusted pilots.

Proven together

The core team previously built **MoneyHOP** — India's first cross-border neobank — scaling it to **\$100M+ ARR in just over 18 months.**

Backed by Ravi Reddy

- MaSerial entrepreneur, 3 exits
- Founder, Suneratech — 2.5k+ employees
- Partner at Pavestone VC. Investor in 20+ startups

Four convictions we're building on

01

Outcome pricing replaces seats

The unit of purchase shifts from access and actions to finished results.

02

Proactive and predictive agents

Agents that are proactive, predict the next move and knows why something worked or didn't.

03

Memory compounds into a moat

Every task makes the system smarter, faster and harder to rip out.

04

The GTM team becomes software

Demand gen, content, ads and RevOps increasingly run on agents.

BUSINESS MODEL

We price the **outcome**, not the software

MODE 01

Execution Mode

Flexible usage on task credits — leads enriched, campaigns launched, content shipped. Ideal for initial engagement and variable needs.

MODE 02

Outcome Mode

Results-as-a-Service pricing tied directly to measurable outcomes — MQLs, meetings booked and pipeline created.

Aligned incentives, lower churn, higher willingness-to-pay — clients pay when value is realized.

TRACTION

BlueDrop: a brochure site → a demand engine in 6 months

100+

MQLs generated

\$1M+

in pipeline sourced

100+

on the waitlist

DELIVERED BY OUR AGENTS

Daily Blogs

+100 clicks / month · ~2 MQLs / month

Ads Agent

60+ leads / month · 25+ MQLs

Webinar Agent

50+ registrations per event

Email Agent

2 meetings booked (Jan) → avg. 4 / month (from Feb)

Material bottom-line impact — not theoretical growth.

EARLY CUSTOMERS & DESIGN PARTNERS

Beyond one win — a **real roster** forming

BlueDrop

PROVEN

From brochure site to a full demand engine — 100+ MQLs and \$1M+ pipeline in 6 months.

TechOrigins

DESIGN PARTNER

Product studio running content, ads and outbound through 10ex agents.

CloudNuro

DESIGN PARTNER

Gartner-recognized enterprise SaaS-management platform (Konica Minolta, Federal Signal).

Plus a 100+ company waitlist and a warm pipeline of 100+ startups via the Venture Dock network.

MARKET

A focused ICP into a massive market

TAM

\$500B+ global martech & GTM spend

Every dollar companies spend trying to manufacture demand.

SAM

AI demand gen & AI-SDR software

\$4.4B in 2025 → \$47B by 2034 — the agentic execution layer.

SOM

1,000+ US B2B venture-backed startups

Our beachhead ICP: funded teams that must show pipeline fast.

Land via a warm wedge — then expand by department and outcome.

COMPETITION

Everyone else sells tools. **We sell outcomes.**

WHAT OTHERS SELL

11x · Artisan · Clay · Agentforce

- ✗ Actions, seats and workflow builders
- ✗ Outbound email only — single channel
- ✗ \$50–60K / year, opaque enterprise pricing
- ✗ Stateless — context lost when people leave

WHAT 10EX SELLS

Results-as-a-Service execution platform

- ✓ **Finished outcomes —** **MQLs, meetings, pipeline**
- ✓ **Multi-channel:** **SEO, ads, webinars, email, RevOps**
- ✓ **Accessible task-credit + outcome pricing**
- ✓ **Execution OS remembers — context compounds**

A category leap — not a feature-set enhancement.

COMPARABLES

The market is minting **AI-execution companies**

11x

11x

\$76M raised

~\$350M valuation

AI SDR (Alice). Backed by a16z & Benchmark.
Sells outbound activity.

R

Relevance AI

\$37M raised

Bessemer-led Series B

AI-agent operating system. Sells the builder,
not the outcome.

A

Artisan

\$25M Series A

YC + HubSpot Ventures

AI BDR (Ava), ~\$5M ARR. Sells a
seat-replacement agent.

~50% of 2025's \$425B in global VC flowed into AI. **These companies sell tools and seats — 10ex sells the outcome itself.**

Why we compound — and why this **isn't a wrapper**

The brain OS

Proprietary per-customer brain orchestrating research, planning, execution in a S.A.G.A.R (Sense, Analyze, Generation, Act, Re-iterate) framework.

Outcome-based pricing

Pay-for-results aligns incentives, builds trust and commands higher willingness-to-pay than seat licenses.

A distribution engine

Ravi Reddy's ecosystem: Suneratech's 250+ enterprise customers, Venture Dock's 100+ startups, Pavestone VC.

Full-stack, multi-channel

One platform across SEO, ads, webinars, email and RevOps — not a point solution or a thin GPT wrapper.

WHERE WE'RE HEADED

Milestones for the next 12–18 months

01

20 customers @ ~\$1K MRR

≈ \$20K MRR — a clear, repeatable path toward a \$1M ARR run-rate.

02

2× the agent suite

Double the agents in production to unlock more outcomes for more teams.

03

Own the beachhead

Win the wedge: 1,000+ US B2B venture-backed startups.

04

Path to \$1M ARR by 2027

Convert pilots to subscriptions and prove the RaaS model at scale.

This raise fuels execution toward these milestones — a partnership to redefine how teams buy growth.

THE BIG PICTURE

The operating system for growth execution.

A future where every company buys outcomes, not software, and runs its entire go-to-market on 10ex agents.
The most outcome-obsessed company in the world.
